**SUBJECT** Notification of Drilling Activities  
Former Mobil Service Station 10-HMG  
1203 Mission Street, Santa Cruz, California

To Whom it May Concern:

At the request of Exxon Mobil Corporation (Exxon Mobil), Environmental Resolutions, Incorporated (ERI) is notifying you of upcoming field work at the subject site. Field work will include properly destroying one off-site groundwater monitoring well (MW7) and four on-site groundwater monitoring wells (MW1 through MW4) in accordance with regulations set forth by the Santa Cruz County Health Services Agency, Environmental Health Department (County). Wells are being destroyed in conjunction with closure of the environmental case at the site, as directed by the California Regional Water Quality Control Board, Central Coast Region (Regional Board), in a letter dated February 21, 2006. Well locations are shown on the attached Generalized Site Plan. Field work is scheduled to occur April 17 and 18, 2006. A project orientation meeting is scheduled for March 15, 2006, at 10:00 A.M., to meet at the site and review the work scope and any safety or access concerns.

The wells will be overdrilled using hollow-stem auger drilling equipment, and the resultant borehole will be filled with cement/bentonite grout from the bottom up using a tremie pipe. The surface will be finished to match surrounding conditions. A representative from the County will likely be present to oversee the field work.

Soil cuttings and rinsate water from drilling activities will be placed in 55-gallon drums and stored at the site pending characterization and disposal. Upon receipt of laboratory analytical results of soil samples from the drums, ERI will coordinate with Exxon Mobil for disposal of the soil and water. ERI is aware of the space constraints at your facility and will coordinate with you for the most convenient storage location. ERI will expedite processing of the soil samples from the drums so that removal can be scheduled as soon as possible. The drums will most likely be at the site for 1 to 2 weeks pending analytical results and disposal coordination.

ERI appreciates your cooperation to ensure that field work occurs safely and efficiently, and will minimize disruption to operations at your facility while on site.

March 14, 2006

Please call Ms. Paula Sime, ERI's project manager for this site, at (707) 766-2000 with any questions regarding the work.

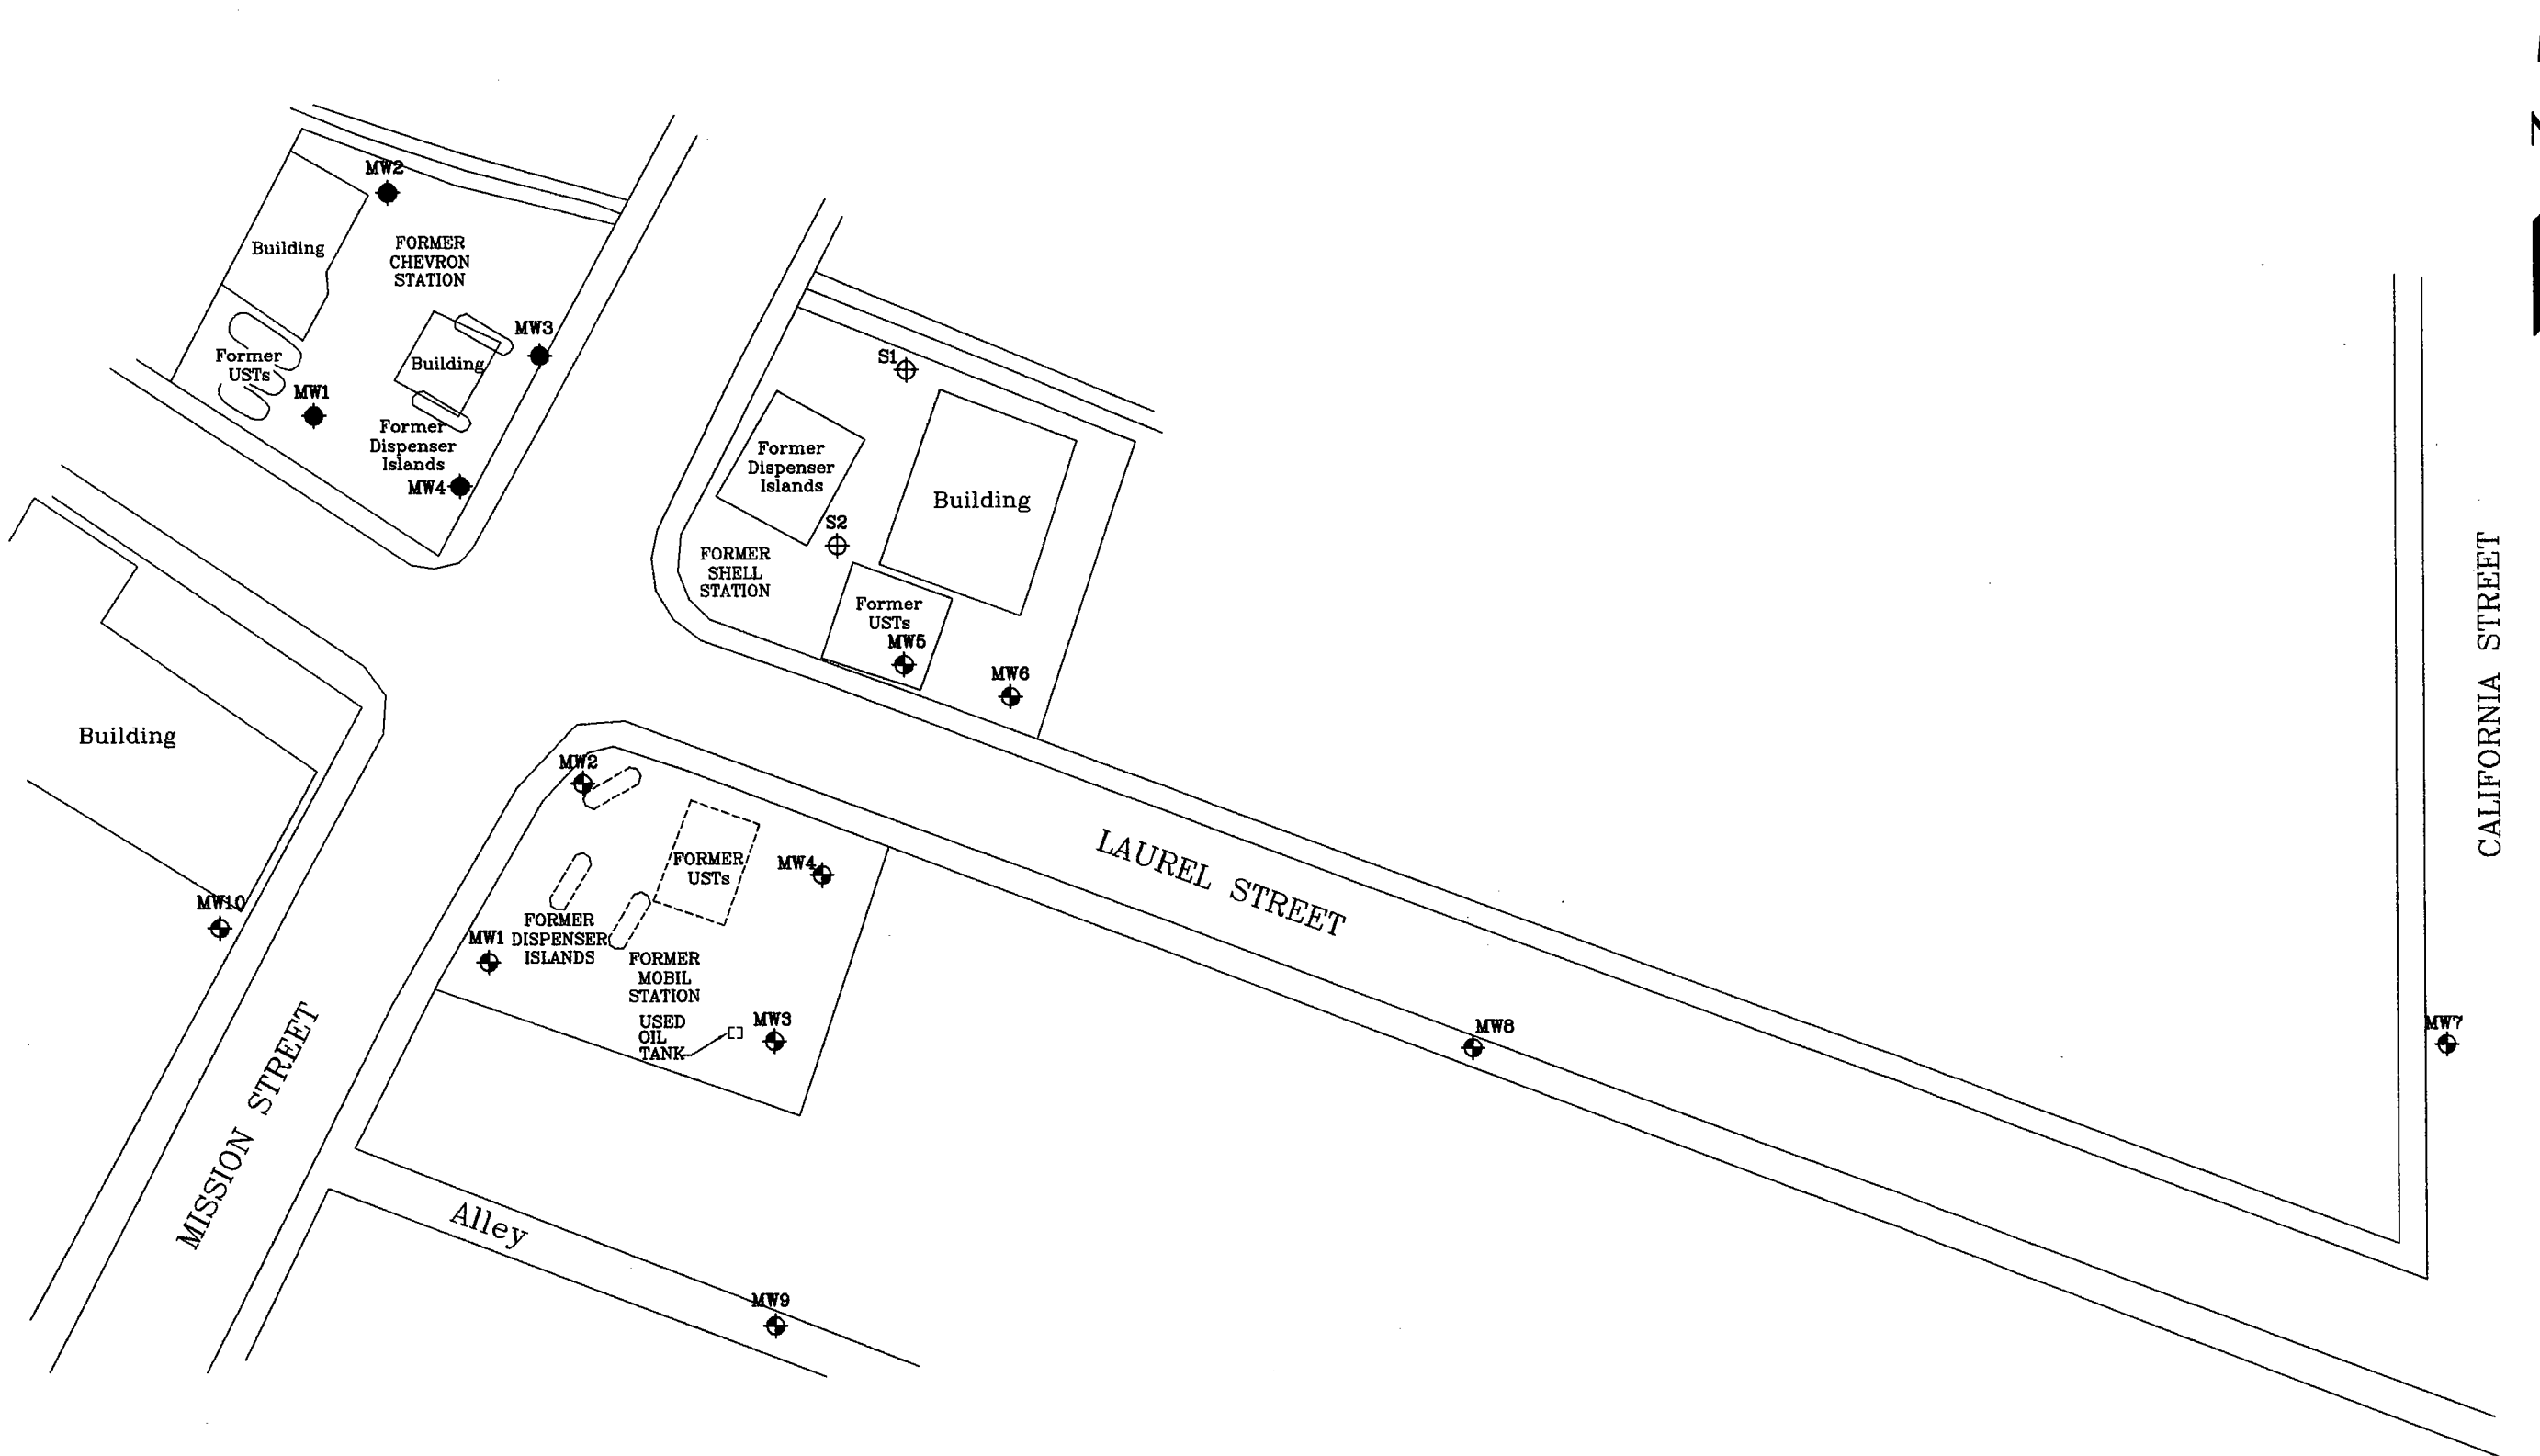

Sincerely,  
Environmental Resolutions, Inc.
